		<p>Topic: Validation study of the Chinese self-report screener version of Columbia-Suicide Severity Rating Scale (C-SSRS) in Chinese patients in Hong Kong</p> <p>Brief summary: Primary Objective: To evaluate the psychometric properties of the Traditional Chinese (Hong Kong) self-report C-SSRS against the clinician-rated version. Secondary Objective: To explore the correlations between suicidal risk and clinical/demographic variables Proving the non-inferiority of the self-report C-SSRS would allow for its widespread adoption in non-psychiatric wards, removing the barrier of specialized training and allowing for standardized risk triage across all hospital departments.</p> <p>Presented by: Dr YUEN Lok Yiu Laurel (Resident, Queen Mary Hospital)</p> <p>Chaired by: Dr LAW Chi Wing (Consultant, QMH)</p>
