PROFESSIONAL ONLINE TALK

OVARIAN TRANSPLANTATION FOR FERTILITY PRESERVATION

Ovarian tissue cryopreservation and transplantation is now an established method for preserving fertility in women and girls undergoing gonadotoxic cancer treatment. Dr. Silber, who performed the world's first ovary transplant and has one of the most extensive clinical experiences in this field, will **review the surgical and freezing techniques involved, along with long-term outcomes.** He will also **discuss how ovarian tissue banking can extend women's reproductive years and the growing potential of in vitro maturation (IVM) for oocytes retrieved from ovarian tissue.**
